CCTV, Monitoring

Highlighted System: EV2

Protecting property and people is challenging today. Our innovative, REAL TIME, security, monitoring and tracking EV2 system in your entire building and/or property provides protection for your people and property include equipment. We customize the system to meet your needs and requirements in a particular area or the entire business. In most instances, our system is compatible with existing systems currently in use to take that system to the next level or our system can serve as a stand-alone system. **EV2 capabilities include, but is not limited to:**

- **EV2 System Integration** - This system can tie into your existing CCTV system, fire, smoke & CO2 system.
- **Mass Notification** - All individuals on the EV2 system can be notified via text, phone, email, and/or through an intercom system of dangerous situations on your property and/or of impending weather conditions.
- **Personnel Safety** - Any individual wearing an EV2 tag or badge can press the help button in an emergency situation while they are any where in EV2 monitored areas. Who pressed the button and their location is sent to the applicable personnel to dispatch help to that individual.
- **Access Control** - Hands free, keyless entry can be available campus wide and/or to specific areas that may be limited to only approved staff, students, and/or visitors. All access, whether approved or an attempt was denied is documented who entered or tried to enter and/or left as well as dates and times for any and/or all doorway/access area in EV2 monitored areas. When an individual is wearing an EV2 tag and is in wheelchair and/or with a walking aid approaches a door, the door automatically opens hands free and wireless. This helps to meet ADA compliance.
